(54) Title: **SYSTEM FOR PROVIDING A PERSONALIZED TV CHANNEL**

(57) **Abstract:** A system provides a personalized TV channel for a user. All users provide visual information and are connected via a network (14) to a server (15). The server has a network unit (26) for receiving real time information, user parameters and user commands via the network and for transmitting the personalized TV channel to the user via the network. Generation unit (27) in the server generates the personalized TV channel for the user in response to the user parameters and user commands by selectively including in the personalized TV channel real time information from further users. The user has a user device (10) that has an input unit (24) for receiving video information related to the user, in particular video information from a web cam. The device has a memory (25) for storing the user parameters identifying the user, and a remote control unit (22) for receiving the user commands for controlling the contents of the personalized TV channel.
